## Section 2: Hazard(s) Identification

**Hazard Classification:** NA

**Signal Word(s):** NA

**Hazard Statements:** NA

**Precautionary Statements:** The chemicals used to produce this product are in a glass matrix and are, therefore, not available to the environment unless the glass is heated to its melting point or ground to an extremely fine particle size. Many of Oceanside's products are made with metal oxides. While the metals are bound up in a glass matrix, grinding to an extremely fine mesh size can liberate some of the metals in the glass. Normal grinding will generally not produce "glass flour or powder" fine enough to liberate any metals. Use a water bath or water grinding wheel when grinding glass. In any event, a NIOSH (National Institute of Occupational Safety & Health) approved dust mask, at a minimum, should be worn during grinding. The use of a respirator outfitted with a HEPA (High Efficiency Particulate Absolute) filter is recommended as HEPA filters provide the greatest measure of personal protection. Good exhaust ventilation is also recommended. Use a water bath or water grinding wheel when grinding glass. Keep your work area as clean as possible and free of glass debris.
